

Form of Written Discussion at the 26th ITTC Conference

Discusser:	
Name	Ahmed Derradji
Affiliation	Institute of Ocean Technology

Name of Technical Committee or Group to be discussed	Resistance Committee
---	----------------------

Written Discussion (within 1,000 words of length):

Your comment, during your presentation, that you did not have access to expertise for UA(Uncertainty Analysis) is true and not true at the same time. At DTML, where your chair works, have access to Joel Park and yes we did update the spreadsheet, and I should note that all spreadsheets are available to all. However, the updated spreadsheet were completed a bit late for TC's to do anything about it. The tests were conducted in the 2nd year in DTML and IOT and it was difficult to disseminate those information to all. The comments above are about the large model (commercial model). The reassessment of dimensions, model dimensions is a good idea to see if the same model was tested is the same for everyone.

This is following by D.Murdey that presented data is surrounded by uncertainties, depends on how your interpretation is not clear to how this is emerging to what?

Response:

The committee are grateful for the clarification but the problem of access was primarily that of workload for individuals whereby the time was not available to deal with the spreadsheets. There was also concern on the committee as to the long term viability of such a system tied as it is to one software retailers products. Members of the committee have still not received the updated spreadsheets.
